# Foundations of Data Science

Fall 2026

Prof. Gilles Louppe
g.louppe@uliege.be

LIÈGE université

# Materials

Instructions and materials are all available on GitHub github.com/glouppe/dats0001-foundations-of-data-science:

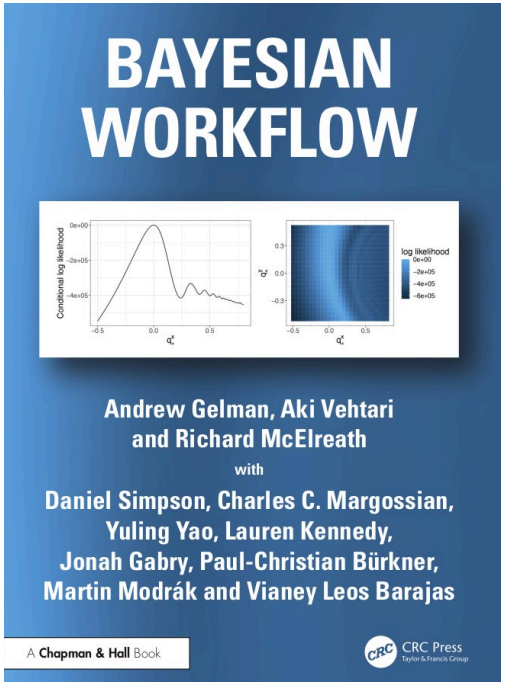

- Schedule
- Slides and notebooks
- Case study

Official course description: engagements pédagogiques.

## Textbook

Gelman, Vehtari, McElreath et al., Bayesian Workflow, Chapman & Hall/CRC, 2026.

- The book covers the principles and practices of Bayesian workflow.
- It is recommended for further reading and deeper understanding of Bayesian workflow.
- Electronic edition freely available for non-commercial use.

# Lectures

- Mondays, 1:30 PM
- Come with your laptop!

# Case study

- Practice your data science skills through an end-to-end analysis, due on December 18, 2026.
- Oral discussion of your analysis and results during the January exam session, separate from the oral exam on theory.

# Exam

Oral exam on theory covered in class.

# Evaluation

- Case study (40%)
- Oral exam on theory (60%)

> A minimum of 8/20 is required for each component. Below that, the lowest of the two grades becomes the final grade.

## Use of AI tools

> AI assistants are **allowed**, without restriction.

The rule is simple: everything you submit, you must be able to explain. Submitting an analysis you do not understand, because an assistant produced it, will be strongly penalized.
